

MEXICO**National mechanism:**

Mexico has not yet adopted a national regulatory framework on space debris mitigation. However, high level discussions within the competent bodies are taking place to develop mechanisms arising in a national legislation in the short term.

Description:

None.

Applicability:

None.

Relation to international mechanisms:

Mexico, as one of the 18 founding members of the Committee on the Peaceful Uses of Outer Space and having signed and ratified the five United Nations Treaties on outer space is aligned with the Space Debris Mitigation Guidelines of the Committee. Moreover, Mexico supports the IADC Guidelines on Space Debris Mitigation and agrees with the ITU Recommendations ITU-R.S 1003 on the environmental protection of the geostationary satellite orbit, the standards of the European Code of Conduct for Space Debris Mitigation as well as the ISO 24113 for space systems: Space Debris Mitigation Requirements.

Link to other national mechanisms:

None.
